# EXECUTIVE SUMMARY

The **AI Founder Programme** by EON AI Ventures is a groundbreaking initiative designed to empower individuals with a tangible, affordable pathway into the **AI-era economy**. For a one-time investment of **\$975** and within a span of **90 self-paced days**, participants gain access to **250 AI workers**, a **personal AI coach**, a **shipped product available on the EON Marketplace**, and a **verified AI credential (EAFI)**. This initiative is not about speculative promises or distant technological advancements; it is about providing immediate, actionable tools for individuals to thrive in a rapidly transforming economic landscape.

The programme addresses the growing disconnect between the AI industry's promises and the public's lived realities. Surveys indicate that **AI anxiety is rising**, with nearly half of Americans expressing concern about the technology's implications and only one-third of workers using AI in their jobs. This gap stems from the AI industry's focus on abstract outcomes—like super-intelligence and productivity gains—that fail to resonate with individuals navigating everyday challenges such as job security, career relevance, and financial stability.

The **AI Founder Programme** is designed as a **practical, affordable path** to bridge this gap. By the end of the **90-day sprint**, participants achieve four transformative milestones:

- 1. 250 AI workers (agents):** Unlike chatbot subscriptions, these are AI agents that participants own. They operate **24/7**, can be directed to solve specific problems, and deliver outputs that participants can monetize.
- 2. Personal AI coach (Brainy 2.0):** A one-on-one mentor with a **real face and voice**, available anytime to guide participants through their journey. This coach rivals the expertise of a high-end professional mentor, but at a price accessible to all.
- 3. Working product on the EON Marketplace:** Participants ship a live product with a functional URL that is accessible to **4,400-plus institutional buyers across 80-plus countries**. This is not merely a certificate of participation; it is a tangible asset with real-world applicability.
- 4. Verified AI credential (EAFI):** A **tamper-resistant, employer-verifiable credential** with a public URL. This ensures participants can credibly demonstrate their AI expertise to employers, customers, or investors.

Participants also benefit from a **pipeline of customers**, surfaced automatically via EON's **Distribution Engine**, eliminating the need to chase leads. By **Day 45**, individuals choose one or more of three distinct career pathways—**The Three Doors**:

- **Door 1: Skills** – Hands-on training in trades like plumbing, HVAC, and welding, where AI cannot replace physical expertise.
- **Door 2: Operator** – Transition into the **scarce, valuable under-10 percent** of workers within organizations who deploy and manage AI agents.
- **Door 3: Builder** – Launch and own an **AI-native business**, deploying **250 agents**, shipping products, and collecting revenue independently.

The programme’s outcomes are backed by a **four-condition money-back guarantee**, ensuring participants are supported throughout their journey. If a participant completes the **100-course AI Fluency curriculum**, attends **12-plus mentor sessions**, submits a **Venture Builder spec by Day 45**, and ships a live product by **Day 90**, they are eligible for a full refund if they have no paying customers.

Unlike high-cost enterprise AI contracts—often exceeding **\$100 million**—the **AI Founder Programme** is accessible to individuals from all walks of life. It requires no prior qualifications, approvals, or waiting lists. Whether you are a laid-off worker, a professional seeking to future-proof your career, a student entering a volatile job market, or a parent looking to inspire your children, this programme provides a **concrete, demonstrable path** to success.

The **AI Founder Programme** represents the culmination of EON AI Ventures’ mission: to transform workforce capability for the AI era. By giving participants **agency, freedom, and ownership**, it eliminates the guesswork of the future and replaces it with actionable steps, measurable progress, and undeniable outcomes.

## THE PROBLEM/CHALLENGE

The AI industry today faces a critical disconnect: while it promises transformative technologies and super-intelligent systems, it fails to address the immediate, practical concerns of ordinary people. This misalignment has led to **rising AI anxiety** and **stalled adoption rates**, with nearly half of Americans expressing fear about AI’s impact and only one in three workers actively using the technology in their jobs. At the heart of this issue is a fundamental question that AI companies have yet to answer: **“What’s in it for me?”**

### The Root of the Problem: Abstract Promises, No Practical Solutions

For over a decade, the AI industry has been selling grand visions of the future:

- **“AI will cure cancer.”** This promise is inspiring but abstract. It does nothing to address a single mother’s immediate concerns about how to pay next month’s rent.

- **“AI will make us more productive.”** While employers may benefit from productivity gains, workers often see their roles diminished or replaced, leaving them more vulnerable.
- **“Super-intelligence is coming.”** This idea may excite AI developers, but it offers little reassurance to truck drivers, nurses, teachers, or laid-off professionals wondering how to remain relevant in the workforce.
- **“Learn to prompt ChatGPT.”** While prompt engineering may improve task efficiency, it often leaves individuals as faster task workers, with no real ownership or control over the tools they use.

These narratives fail to connect with the realities faced by workers, students, parents, and communities. They focus on distant, speculative outcomes while ignoring the urgent need for **tangible, immediate solutions**. This disconnect has led to widespread skepticism, with many individuals feeling that AI’s benefits are reserved for corporations and elites, not for them.

## **Economic Uncertainty and the Human Need for Agency**

The pace of AI acceleration has created a sense of economic instability. Workers across industries are grappling with questions such as:

- **“Will my job still exist in five years?”**
- **“How do I compete in a world where AI is everywhere?”**
- **“What can I do today to secure my family’s future?”**

This uncertainty is compounded by a growing recognition that traditional education and training systems are ill-equipped to keep up with the speed of AI innovation. Workers are left stranded, students are unsure of what to study, and parents are unable to guide their children toward careers that AI will not render obsolete.

At its core, the challenge is not technological—it is human. People want **agency**, not abstract promises. They want to know how AI can empower them to take control of their lives and work, to protect their families, and to build a future they own.

## **The AI Founder Programme: A Practical Solution to a Pressing Problem**

EON AI Ventures has recognized this gap and designed the **AI Founder Programme** to fill it. Unlike other AI offerings that focus on enterprises or high-cost contracts, this programme is tailored for individuals. It answers the question **“What’s in it for me?”** with **practical, affordable solutions**:

- **Ownership of 250 AI workers:** Participants gain tools they control, not subscriptions they rent. These agents work tirelessly to solve problems and generate value.

- **Personal AI coach (Brainy 2.0):** A mentor for every participant, providing guidance, answers, and strategies to navigate the AI era.
- **A shipped product and verifiable credential:** Real-world outcomes that participants can show to employers, customers, and communities.
- **Three Doors to choose from:** Pathways that fit diverse goals, from skilled trades to AI-native entrepreneurship.

By offering these tools and outcomes at a price point of **\$975**, the **AI Founder Programme** makes the AI economy accessible to anyone willing to take the first step. It replaces fear with empowerment, speculation with action, and uncertainty with measurable progress.

In addressing the core challenges of **AI anxiety** and **stalled adoption**, EON AI Ventures is not just transforming workforce capability—it is transforming how individuals see their role in the AI era. The message is clear: the future is no longer a guess. It is a path you can start today.

## THE SOLUTION

The **AI Founder Programme** by EON AI Ventures is not just another AI training initiative; it is the first tangible, results-oriented pathway for individuals to claim their place in the rapidly evolving **AI-era economy**. Designed to address the disconnect between AI's potential and its accessibility for everyday people, this program delivers actionable outcomes, not vague promises. By focusing on **agency, freedom, and ownership**, the programme empowers participants to build real-world value with AI tools, all within a manageable, self-paced, 90-day framework.

### A Practical and Affordable On-Ramp to the AI Era

For just **\$975**, participants gain access to a suite of resources that would otherwise require significant capital, advanced technical skills, or corporate backing. In a world where AI adoption is often gated behind expensive enterprise solutions or inaccessible academic programs, the **AI Founder Programme** democratizes opportunity. It provides a **practical, affordable path** to enter the AI era with tools that deliver measurable outcomes.

The programme is structured as a **90-day sprint**, allowing participants to balance their current commitments while building their future. This self-paced format ensures flexibility while still maintaining a clear timeline for deliverables. By the end of the program, participants will have:

- **250 AI workers** operating autonomously on tasks they define.
- A **personal AI coach** in the form of **Brainy 2.0**, available 24/7 for guidance and mentorship.

- A **live product on the EON Marketplace**, accessible to over **4,400 institutional buyers across 80-plus countries**.
- A **verified AI credential (EAFI)** that is tamper-resistant, employer-verifiable, and publicly accessible via a URL.
- A **pipeline of customers** brought to them automatically through the **Distribution Engine**, eliminating the need for participants to chase leads.

## Addressing the Core Challenge: “What’s in it for Me?”

The **AI Founder Programme** is uniquely positioned to answer the question that has plagued the AI industry: "What does this mean for me?" While much of the AI narrative focuses on abstract promises like curing diseases or achieving super-intelligence, EON AI Ventures focuses on immediate, tangible benefits. The program is designed for real people facing real challenges—whether it’s a laid-off worker seeking a new income stream, a parent trying to model a path for their children, or a professional looking to future-proof their career.

Participants don’t just learn about AI; they **deploy it**. By owning and directing **250 AI workers**, they gain the ability to solve problems, create value, and generate income. This is not a theoretical exercise or a passive learning experience; it’s an active journey toward becoming an **AI-native business owner**, a skilled operator within their company, or a professional mastering hands-on trades that AI cannot replace.

## A Guaranteed Path to Success—or Your Money Back

The programme’s **four-condition money-back guarantee** is a testament to its commitment to measurable outcomes. Participants who complete the following steps and do not acquire paying customers are guaranteed a full refund:

1. Finish the **100-course AI Fluency curriculum**.
2. Attend **12-plus mentor sessions**.
3. Submit a **Venture Builder** specification by **Day 45**.
4. Ship a live product URL by **Day 90**.

This guarantee is not based on subjective evaluation but is **platform-enforced**, providing participants with confidence that their investment is secure.

## Three Doors to Agency, Freedom, and Ownership

Midway through the program, participants choose one or more of the **Three Doors**, which represent distinct pathways tailored to individual goals and strengths:

- **Door 1: Skills** – Focused on practical, hands-on trades like plumbing, HVAC, and welding that AI cannot replace. These roles ensure participants remain indispensable in the workforce.
- **Door 2: Operator** – Designed for those who want to stay employed but become the rare professional who can deploy and manage AI agents within their organization, joining the **under-10 percent of workers** who are highly valuable and hard to replace.
- **Door 3: Builder** – For entrepreneurs aiming to establish their own **AI-native business**, leveraging their **250 AI workers** to deploy solutions, ship products, and collect revenue independently.

Through these pathways, the **AI Founder Programme** transforms abstract AI potential into concrete, individual empowerment.

## KEY FEATURES/CAPABILITIES

The **AI Founder Programme** stands out as a comprehensive, end-to-end solution for individuals aiming to thrive in the **AI-era economy**. Each feature is designed to deliver measurable value, ensuring participants not only learn but also achieve tangible outcomes.

### 1. 250 AI Workers Operating 24/7

At the core of the programme is the deployment of **250 AI workers**—autonomous agents capable of working around the clock. These are not generic chatbots or limited tools; they are versatile agents that participants can own, direct, and use to tackle a variety of challenges. Whether it's automating workflows, analyzing data, or generating content, these AI workers provide participants with a scalable workforce at their fingertips.

### 2. Brainy 2.0: Your Personal AI Coach

The **Brainy 2.0** AI coach acts as a 24/7 mentor, delivering personalized guidance at a level typically reserved for elite MBA programs. With a **real face and real voice**, Brainy 2.0 offers an intuitive, engaging experience, helping participants navigate the program, refine their strategies, and maximize the potential of their AI workers. This mentorship ensures participants are never alone in their journey.

### 3. A Live URL Product on the EON Marketplace

By the end of the 90-day sprint, participants will have a **working product** listed on the **EON Marketplace**, a platform that connects them to **4,400-plus institutional buyers across**

**80-plus countries.** This marketplace ensures that participants' efforts translate into opportunities, providing global visibility and access to a wide network of potential customers.

#### 4. Verified AI Credential (EAFI)

Participants earn a **verified AI credential (EAFI)** that is tamper-resistant and employer-verifiable. This credential is more than a certificate; it's a **publicly accessible URL** that demonstrates participants' achievements and capabilities to employers, clients, and institutions. The **EAFI** adds credibility and opens doors to new opportunities.

#### 5. Automatic Customer Pipelines via the Distribution Engine

Through the **Distribution Engine**, participants gain access to a **pipeline of customers** without the need for active prospecting. This automation allows them to focus on delivering value rather than chasing leads, ensuring a steady flow of business opportunities.

#### 6. Three Defined Paths: Skills, Operator, Builder

Participants choose from the **Three Doors** to tailor their journey:

- **Skills:** Hands-on trades training like plumbing and welding, ensuring irreplaceable roles in industries AI cannot fully automate.
- **Operator:** Master AI deployment within a corporate setting, becoming part of the elite **under-10 percent of workers** who are indispensable.
- **Builder:** Establish an **AI-native business**, deploying the **250 AI workers** to ship products, solve problems, and generate revenue independently.

#### 7. Four-Condition Money-Back Guarantee

The programme's **four-condition money-back guarantee** stands as a hallmark of accountability. Participants who:

1. Complete the **100-course AI Fluency curriculum**,
2. Attend **12-plus mentor sessions**,
3. Submit a **Venture Builder** specification by **Day 45**, and
4. Ship a live product URL by **Day 90**,

are guaranteed a full refund if they fail to acquire paying customers. This ensures every participant has a secure path to success.

The **AI Founder Programme** is not just an educational initiative; it is a transformational experience offering real tools, real outcomes, and a real future in the AI era. By combining cutting-edge features with a focus on individual empowerment, EON AI Ventures has created a program that is as accessible as it is revolutionary.

## HOW IT WORKS

The **AI Founder Programme** is a meticulously designed 90-day, self-paced sprint that turns individuals into active participants in the **AI-era economy**. It is structured around a clear and actionable roadmap that enables participants to gain **ownership, customer acquisition, and verification** while building a tangible AI-driven business. By the end of the program, participants not only understand the capabilities of AI but also deploy them in practical, revenue-generating ways.

### A Step-by-Step Journey to AI-Era Ownership

Participants begin their journey by enrolling in the **AI Founder Programme** for a one-time fee of \$975. The program is designed to be accessible to anyone—there are no prerequisites, no application approvals, and no barriers to entry. Upon enrolment, participants gain immediate access to an ecosystem of tools, guidance, and AI-driven capabilities that are both practical and transformative.

#### 1. Comprehensive AI Fluency Curriculum

At the core of the program is the **100-course AI Fluency curriculum**, a robust and accessible framework designed to demystify AI and provide participants with a foundational understanding of its applications. This curriculum is more than theoretical; it is tailored to be hands-on, ensuring that participants can immediately apply what they learn to real-world challenges.

#### 2. Personal AI Coach: Brainy 2.0

Throughout the program, participants have access to a **personal AI coach** called **Brainy 2.0**. Unlike traditional mentorship or static learning tools, Brainy 2.0 is a dynamic, AI-powered mentor with a real face and voice, available 24/7 to provide guidance, answer questions, and help participants stay on track. This level of personalized support ensures that no participant feels lost or unsupported at any stage of their journey.

#### 3. Building a Venture Spec

By Day 45, participants are expected to submit a **Venture Builder spec**, a detailed plan that outlines their chosen path under the program's **Three Doors** framework:

- **Door 1: Skills** – Focus on hands-on trades like plumbing, HVAC, or welding, which AI cannot replace but can enhance.
- **Door 2: Operator** – Become the in-demand individual within a company who can deploy and manage AI agents effectively.
- **Door 3: Builder** – Create and own an **AI-native business** by deploying 250 AI agents to solve specific customer problems.

This milestone is critical as it helps participants clarify their goals and align their efforts with tangible outcomes.

#### 4. Shipping a Live Product

By Day 90, participants are required to ship a **working product** on the **EON Marketplace**, a platform that connects participants with over **4,400 institutional buyers across 80-plus countries**. This step is not theoretical—it culminates in a live product with a public URL, ready to generate revenue and make an impact.

The program’s focus on delivering a **live product** differentiates it from other training or upskilling initiatives. Participants do not just learn; they build, launch, and operate a functional asset in the AI economy.

#### 5. Four-Condition Money-Back Guarantee

To ensure accountability and manage risk for participants, the program includes a **four-condition money-back guarantee**:

- Completion of the **100-course AI Fluency curriculum**.
- Attendance in **12-plus mentor sessions**.
- Submission of a **Venture Builder spec** by Day 45.
- Shipping a **live product** with an active URL by Day 90.

If all conditions are met and the participant does not acquire any paying customers, they are eligible for a full refund—tracked and enforced objectively by the platform.

### An Ecosystem Designed for Success

The **AI Founder Programme** is not just a curriculum; it is a fully integrated ecosystem that supports participants at every step. Key components include:

- **250 AI Workers**: Participants gain access to a fleet of **250 AI agents** that work 24/7 under their control. These agents are not passive tools but active problem solvers that participants can deploy to automate tasks, analyze data, or create outputs.

- **EON Marketplace:** By launching their product on the **EON Marketplace**, participants tap into a global distribution network, eliminating the need for individual customer acquisition efforts. The program's **Distribution Engine** ensures that customers find the participants' products, not the other way around.
- **Verified AI Credential (EAFI):** Upon program completion, participants earn a **verified AI credential**. This tamper-resistant, employer-verifiable credential serves as a public testament to their skills and capabilities, offering long-term professional credibility.

The program is designed to ensure that participants not only learn but also **perform and own** in the AI economy. By combining education, mentorship, and ownership, the **AI Founder Programme** transforms theoretical knowledge into actionable outcomes, enabling participants to build a sustainable future in only 90 days.

## **BENEFITS/OUTCOMES**

The **AI Founder Programme** delivers measurable, transformative benefits for individuals seeking to secure their place in the **AI-era economy**. By focusing on practical outcomes and equipping participants with ownership, tools, and verified credentials, the program goes beyond traditional training to deliver real-world impact.

### **1. Ownership of AI Agents Producing Valuable Outputs**

Participants gain direct ownership of **250 AI workers**, which operate as always-on agents delivering tangible results. These agents are not merely tools participants rent or borrow; they are assets participants control fully. This ownership allows individuals to:

- Automate repetitive or time-intensive tasks.
- Generate valuable outputs for personal ventures or clients.
- Scale their operations without relying on additional human resources.

Instead of being passive users of AI, participants become active owners, wielding AI to address specific challenges and create economic value.

### **2. Tangible Products Linked to Customer Pipelines**

The program ensures every participant ships a **live product** on the **EON Marketplace** by Day 90. This product is not just a prototype but a functional offering linked to a **pipeline of customers** through the **Distribution Engine**. This approach removes a common barrier to success: finding and securing customers.

Participants do not need to chase leads or invest in marketing campaigns; the **Distribution Engine** surfaces customers automatically, enabling participants to focus on refining their products and delivering value. This guarantees that each product has a direct path to monetization.

### 3. Improved Employability Through Verified Credentials

The **EAFI (EON AI Founder Credential)** offers participants a tamper-resistant, publicly verifiable record of their skills and achievements. This credential:

- Signals mastery of AI fluency and practical application.
- Enhances employability in a competitive market where AI expertise is scarce.
- Provides long-term credibility with employers, clients, and institutions.

Unlike generic certifications, the **EAFI** is tied to demonstrable outcomes—such as a shipped product and customer pipeline—making it a powerful differentiator.

### 4. Broader Individual Agency and Economic Stability

The program empowers participants to achieve **agency, freedom, and ownership** in the **AI-era economy**. By enabling participants to choose their own path—whether as a skilled tradesperson, an AI operator, or a business builder—the program addresses a fundamental human need: control over one’s future.

For many participants, this translates into:

- Greater financial security for their families.
- Independence from traditional employment structures.
- A sense of confidence in navigating a rapidly changing economic landscape.

### 5. Positive Social and Professional Impact

The **AI Founder Programme** is particularly impactful for vulnerable populations, including:

- Laid-off workers seeking a fresh start in a challenging job market.
- Students and recent graduates struggling to find entry-level opportunities.
- Parents who wish to model resilience and adaptability for their children.
- Communities or governments looking for scalable **AI-native reskilling instruments**.

By equipping individuals with tools, knowledge, and pathways to success, the program fosters resilience and growth—not just for participants but for the broader ecosystems they inhabit.

In just 90 days, the **AI Founder Programme** bridges the gap between AI's potential and its practical application for real people. It delivers not only education but also empowerment, enabling participants to step into the future with confidence, capability, and concrete results.

## Conclusion

The **AI Founder Programme** by EON AI Ventures is not just a response to the challenges of the AI era—it is a transformative pathway that equips individuals with the tools, agency, and outcomes they need to thrive. As AI reshapes industries and economies at unprecedented speeds, this programme offers a tangible, practical, and affordable solution for anyone ready to take charge of their future.

### A Practical Answer to a Complex Problem

For too long, the promises surrounding AI have felt distant and abstract to the average individual. Super-intelligence, disease cures, and productivity gains are compelling at a macro level but fail to resonate with people who need solutions today. The **AI Founder Programme** bridges this gap by offering a **self-paced, 90-day sprint** that delivers real-world outcomes:

- **250 AI workers** that participants own and control, operating 24/7 to solve problems and generate results.
- A **personal AI coach**—powered by **Brainy 2.0**—providing round-the-clock mentorship that rivals the expertise of elite business schools.
- A **working product on the EON Marketplace**, ready to generate revenue and accessible to **4,400-plus institutional buyers across 80-plus countries**.
- A **verified AI credential (EAFI)**, offering tamper-resistant certification that is publicly verifiable by any employer or institution.
- A **pipeline of customers** surfaced automatically through the **Distribution Engine**, eliminating the need for participants to chase leads.

This programme replaces anxiety with empowerment, offering a path rooted in agency, freedom, and ownership.

## Tailored Pathways for Every Aspirant

The **Three Doors** framework ensures that participants can tailor their journey based on their unique goals and circumstances, with the ability to pursue multiple paths in parallel:

- **Door 1: Skills**—Practical training in trades like plumbing, HVAC, or welding, where AI cannot replace the need for physical expertise.
- **Door 2: Operator**—Becoming the rare professional who deploys and manages AI agents within a company, securing a position in the **under-10 percent of workers** who are highly valuable and hard to replace.
- **Door 3: Builder**—Launching an **AI-native business** with **250 AI workers**, a shipped product, and the ability to generate revenue independently of traditional employment.

This flexibility ensures that the programme accommodates everyone—from a laid-off worker seeking a lifeline to a student preparing for an AI-driven job market.

## Measured Success, Guaranteed Outcomes

Unlike traditional education or training programs that rely on subjective evaluations or trust-based promises, the **AI Founder Programme** guarantees results through an **objective, four-condition money-back policy**:

1. Complete the **100-course AI Fluency curriculum**.
2. Attend **12-plus mentor sessions**.
3. Submit a **Venture Builder** specification by **Day 45**.
4. Ship a live product URL by **Day 90**.

If these conditions are met and the participant still has no paying customers, they receive a full refund. This platform-enforced guarantee underscores EON AI Ventures' confidence in the programme's ability to deliver meaningful outcomes.

## The Individual-Scale Answer to the AI-Era Economy

In a world where economic power increasingly resides with those who can leverage AI, the **AI Founder Programme** democratizes access to the tools and systems that drive success. As industry leaders predict the rise of **10 trillionaires** and acknowledge that **agency, not super-intelligence**, is what people truly seek, this programme positions participants to lead rather than follow.

EON AI Ventures has built a system that integrates every essential component—AI agents, personalized coaching, a marketplace for products, and a customer distribution engine—into a cohesive, individual-scale solution. This is not speculative. It is a **documented direction of travel**, validated by the industry’s most credible voices and supported by independent analysis from leading institutions.

## **Enrol Today—Own Your Future**

The **AI Founder Programme** is open for enrolment now, with no waiting lists or prerequisite qualifications. At just **\$975**, it is designed to be accessible to anyone willing to take the first step toward an AI-enabled future. Whether you are a laid-off worker, an employed professional seeking to future-proof your career, a student navigating a changing job market, or a parent looking to guide your family, this programme provides a concrete, actionable path forward.

By completing the programme, participants gain not just knowledge but ownership—a working product, a verified credential, and the ability to generate income independently. It is not just about adapting to the AI era; it is about thriving in it.

The future does not need to be a guess. With the **AI Founder Programme**, it starts today.
