EXECUTIVE SUMMARY

EON AI Ventures has introduced the **\$975 AI Founder Programme**, a groundbreaking initiative designed to address a critical gap the AI industry itself has openly acknowledged: the absence of a plan for individuals outside the confines of data centers and frontier labs. As artificial intelligence continues to advance at a breathtaking pace, the economic future for billions of individuals worldwide hangs in the balance. The **AI Founder Programme** bridges this divide, offering a self-paced, 90-day solution that equips participants with the tools and capabilities to thrive in a **post-AGI labor market** increasingly dominated by just three viable roles—**founder, joiner, or investor**.

At the heart of this programme lies a singular premise: AI's benefits must extend beyond Silicon Valley and into the hands of everyday individuals. As highlighted in the April 2026 episode of the *Moonshots* podcast, industry insiders such as Alex Wissner-Gross and Dave Blundin candidly admitted that no current strategy exists to empower the majority of the global population to participate in the AI economy. Blundin's stark prediction that "all other career paths are going to disappear" underscores the urgency of the moment. EON AI Ventures has stepped into this void, delivering a solution that democratizes access to **AI-native business tools** while offering measurable outcomes and a clear entry point into the new economic landscape.

Participants of the **AI Founder Programme** gain access to a suite of five essential tools typically reserved for Silicon Valley founders. These include:

- **250 AI Workers:** A fleet of 250 AI agents running 24/7 on shared cloud compute, delivering unparalleled operational leverage.
- **Brainy 2.0 AI Coach:** A personal AI mentor with natural voice and interactive capabilities, available around the clock to guide participants through every stage of their journey.
- **EON Marketplace:** A global network of **4,400-plus institutional buyers across 80-plus countries**, providing participants with immediate distribution channels for their products.
- **EAFI Credential:** A tamper-resistant, employer-verifiable credential that acts as a public signal of expertise and capability.
- **Distribution Engine:** An integrated customer pipeline that automatically surfaces paying customers, eliminating the need for costly growth marketing efforts.

These tools are not only accessible at an unprecedented price point but also engineered to meet the structural challenges identified by industry leaders. The programme's design ensures relevance across the three primary paths identified by Blundin—**Skills (trades work AI cannot do), Operator (deploying agents within companies), and Builder (founding AI-driven businesses)**. This alignment provides participants with a roadmap to success regardless of their starting point.

Structured for maximum impact, the programme offers a **four-condition money-back guarantee** that further underscores EON AI Ventures’ commitment to delivering measurable outcomes. Participants who complete the **100-course AI Fluency curriculum**, attend **12-plus mentor sessions**, submit a **Venture Builder spec** by Day 45, and ship a **live product URL** by Day 90 are eligible for a full refund if they fail to secure paying customers. This objective, platform-enforced guarantee eliminates the risk for participants while ensuring accountability on all sides.

The **AI Founder Programme** also addresses the broader structural failures of the AI industry. As noted on **Moonshots**, AI benefits have become increasingly concentrated within Silicon Valley, with **14% of global market capitalization** now tied to a single metropolitan area of just one million people. Frontier labs have exacerbated this divide through practices such as geo-blocking advanced models, leaving entire regions without access to cutting-edge technologies. EON AI Ventures’ solution directly addresses this inequity by packaging the operational toolkit of a Silicon Valley founder into an affordable, accessible programme for individuals worldwide.

In summary, the **AI Founder Programme** is more than a training initiative; it is a structural intervention designed to empower individuals outside the data centers to thrive in the AI-driven economy. With its unique combination of state-of-the-art tools, a risk-free guarantee, and a clear alignment with the evolving labor market, the programme positions EON AI Ventures as the operational answer to the AI industry’s most pressing challenge: building a future that works for everyone, not just the elite few.

THE PROBLEM/CHALLENGE

The rapid advancement of artificial intelligence has led to a seismic shift in the global labor market, with the benefits of this transformation increasingly concentrated within Silicon Valley and its frontier labs. Despite promises of an abundant future driven by **artificial general intelligence (AGI)**, the AI industry now faces a structural failure: it has no plan for the majority of people who live beyond the confines of data centers and elite ecosystems. This failure was openly acknowledged in the April 2026 episode of the **Moonshots** podcast, where industry insiders such as Alex Wissner-Gross, Salim Ismail, and Dave Blundin admitted that the current trajectory of AI development leaves billions of individuals without a viable path forward.

The **post-AGI labor market**, as framed by Blundin, is alarmingly narrow. He stated bluntly: “To thrive [post-AGI], you either need to be a founder or a joiner or an investor. All other career paths are going to disappear.” This stark prediction highlights the obsolescence of traditional career ladders, a reality further underscored by Peter Diamandis’ observation that the once-standard progression from degree to internship to entry-level job has effectively vanished. Compounding this issue, frontier labs and major corporations have been slow—or outright unable—to redesign their operations for **AI-native workflows**, leaving many incumbents incapable of absorbing the transition at speed.

Adding to these challenges is the geographic concentration of AI's economic benefits. The San Francisco metropolitan area, home to just one million people, now accounts for **14% of global market capitalization**. This staggering figure illustrates the extreme centralization of AI productivity and wealth. As Wissner-Gross pointed out during the *Moonshots* discussion, there is currently no mechanism to diffuse this productivity to the rest of the world. Practices such as geo-blocking advanced AI models, like Anthropic's Mythos, further entrench this divide, leaving entire regions without access to cutting-edge tools and technologies.

The implications of this structural failure are profound. Individuals outside the elite circles of frontier labs find themselves excluded from the AI economy, with no clear pathway to participate. Entry-level job opportunities have evaporated, and the traditional middle-skill roles that once provided economic stability are increasingly automated or rendered obsolete. As Blundin aptly noted, "It's really do or die now... no one's hiring."

While the industry has acknowledged these challenges, it has yet to propose a viable solution. The promises of AGI have not been accompanied by a bridge to connect this future to the daily lives of the majority of the global population. This disconnect represents a critical failure of vision and execution—a failure that EON AI Ventures is uniquely positioned to address.

The **AI Founder Programme** directly confronts these challenges by offering individuals the tools and resources they need to succeed in this rapidly changing landscape. By democratizing access to **AI-native business tools**—including **250 AI Workers**, the **Brainy 2.0 AI Coach**, and the **EON Marketplace**—the programme empowers participants to take control of their economic futures. Whether through building their own AI-driven businesses, deploying agents within existing companies, or mastering trades that AI cannot fully automate, participants gain a clear and actionable pathway to thrive in the new labor market.

Ultimately, the challenge is not just about technology but about access, equity, and inclusion. Without intervention, the trajectory of the AI economy will continue to favor concentration over diffusion, leaving billions excluded from its benefits. EON AI Ventures' **AI Founder Programme** represents a bold and necessary step toward rectifying this imbalance, offering a plan for the rest of the world—a plan the industry itself has admitted it does not have.

THE SOLUTION: The AI Founder Programme

The **AI Founder Programme** is EON AI Ventures' bold answer to the structural challenges posed by the rapid evolution of artificial intelligence. At its core, it offers a 90-day, self-paced system designed to democratize access to the tools and opportunities that have historically been confined to Silicon Valley elites. For a one-time cost of **\$975**, the programme equips individuals with the operational resources to transition into one of three viable roles in the **post-AGI labor market: builder, operator, or skills-based worker**. This initiative is not

just a training curriculum; it is a comprehensive, execution-focused bridge to the AI-powered economy.

Addressing the Structural Gap

The AI industry has openly admitted its failure to plan for the majority of the global workforce — the “**country of non-geniuses outside the data center**” — as highlighted by AI insiders on the **Moonshots podcast**. With the entry-level job ladder “confirmed broken” and traditional career paths rapidly disappearing, the **AI Founder Programme** provides a critical pathway for individuals to remain economically viable. It directly responds to the concentration of AI productivity and wealth in small geographic hubs like San Francisco, where **14% of global market capitalization** is controlled by a population of just one million people. By offering a globally accessible, operational alternative, EON empowers individuals to participate in — and even thrive within — this concentrated economic landscape.

Three Doors, Three Roles

The programme’s design revolves around the three roles identified by industry leaders as the only ones likely to survive the transition to an AI-dominated economy: **founder, joiner (operator), and skills-based worker**. Participants are not locked into a single path; instead, they are given the flexibility to explore and choose their preferred trajectory by **Day 45** of the 90-day sprint. This flexibility ensures that each individual can align their efforts with their strengths, interests, and market realities.

- **Door 1: Skills-Based Worker**

This path is tailored for individuals in trades or professions where AI tools can augment human expertise rather than replace it. Examples include plumbers, electricians, welders, and mechanics. For instance, a self-taught auto mechanic who builds an **AI diagnostic agent** exemplifies how this role can leverage AI without reliance on a data center.

- **Door 2: Operator**

This “joiner” role focuses on becoming part of the small percentage of workers who deploy and manage AI agents within organizations. Operators are the enablers who help companies transition to **AI-native operations**, gaining promotions and recognition in an otherwise shrinking job market.

- **Door 3: Builder**

The most entrepreneurial path, this role empowers individuals to become founders of their own **AI-native businesses**. By deploying **250 AI agents**, shipping products, and collecting revenue, participants can create scalable ventures that compete in the global AI economy.

A System Built for Measurable Outcomes

The **AI Founder Programme** is not merely theoretical. It is engineered for execution, with clear, measurable milestones at every stage. Participants are supported by a **four-condition money-back guarantee**, ensuring that those who fully commit to the programme but fail to generate paying customers receive a full refund. The conditions are straightforward:

1. Complete the **100-course AI Fluency curriculum**.
2. Attend at least 12 mentor sessions with the **Brainy 2.0 AI Coach**.
3. Submit a **Venture Builder spec** by **Day 45**.
4. Ship a **live product URL** by **Day 90**.

This objective, platform-enforced guarantee underscores EON AI Ventures' confidence in the programme and its commitment to participant success.

Affordable and Scalable Access

The **AI Founder Programme** is deliberately priced at **\$975** — the cost of a used laptop — to ensure accessibility for individuals worldwide. This price point reflects EON's mission to create a **diffusion** mechanism for AI productivity that extends well beyond the geographic and economic concentration of Silicon Valley. By packaging the same tools and resources used by elite founders into an affordable, scalable system, the programme lowers the barriers to entry for anyone willing to invest time and effort.

A New Paradigm for Workforce Transformation

EON's solution is not just about teaching individuals to adapt; it is about empowering them to lead and innovate within the AI economy. Whether participants choose to enhance their existing skills, join the ranks of AI operators, or launch their own ventures, the **AI Founder Programme** transforms workforce capability for the **AI era**. It is the operational bridge between the promises of frontier labs and the realities faced by billions of people outside the data centers.

KEY FEATURES/CAPABILITIES

The **AI Founder Programme** is built on five core assets that collectively replicate the operational toolkit of a Silicon Valley founder. These features are designed to empower participants with the capabilities needed to thrive in the **post-AGI labor market**, regardless of their prior experience or geographic location. Each feature is engineered for accessibility, scalability, and immediate impact.

1. 250 AI Workers: Your Leverage

Participants gain access to **250 AI agents** running 24/7 on shared cloud compute. These agents provide the same computational leverage available to elite tech founders, enabling participants to perform complex tasks, automate workflows, and scale their operations without requiring a physical data center. This democratization of compute power ensures that anyone, anywhere can harness the productivity benefits of AI.

2. Brainy 2.0 AI Coach: Your Mentor

The **Brainy 2.0 AI Coach** serves as a personal AI mentor, offering real-time guidance and support throughout the programme. With a realistic face and voice, the coach is available on-demand, providing expert advice, answering questions, and helping participants navigate challenges. This feature mirrors the advisory resources typically reserved for Silicon Valley insiders, making high-quality mentorship accessible to all.

3. EON Marketplace: Your Distribution

The **EON Marketplace** connects participants to a global audience of **4,400-plus institutional buyers across 80-plus countries**. This pre-built distribution network eliminates the need for participants to independently source customers, allowing them to focus on developing and refining their products. The marketplace ensures that every participant has access to a ready-made audience for their offerings.

4. EAFI Credential: Your Proof

The **EAFI Credential** is a tamper-resistant, employer-verifiable certification issued as a public URL. It serves as concrete proof of participants' skills and achievements, providing a portable signal of credibility that they control. Unlike traditional HR-dependent credentials, this feature empowers participants to independently showcase their expertise to potential employers, clients, and investors.

5. Distribution Engine: Your Pipeline

The **Distribution Engine** automatically surfaces paying customers for participants' products and services. By embedding customer acquisition directly into the platform, EON eliminates the need for expensive growth marketing campaigns. This feature ensures that participants can focus on execution and delivery while the platform handles the complexities of lead generation.

Aligned with Clear Milestones

The programme's features are tightly integrated with its measurable milestones, including the **100-course AI Fluency curriculum**, submission of a **Venture Builder spec**, and the launch of a **live product URL**. These milestones ensure that participants not only learn but also apply their knowledge to create tangible outcomes.

Guaranteed Success or Money Back

EON's **money-back guarantee** further reinforces the programme's focus on participant success. By tying the guarantee to clear, objective criteria, EON demonstrates its commitment to delivering real, measurable value.

A Complete Toolkit for the AI Economy

Together, these five features provide participants with everything they need to succeed in the **post-AGI labor market**. From computational leverage and expert mentorship to global distribution and verifiable credentials, the **AI Founder Programme** delivers the full operational toolkit of a Silicon Valley founder — packaged for anyone, anywhere. At **\$975**, it represents an unparalleled opportunity to transform individual capability for the **AI era**.

HOW IT WORKS

The **AI Founder Programme** is a meticulously designed, 90-day self-paced sprint that equips participants with the tools and strategies necessary to succeed in the rapidly evolving AI economy. The structured timeline ensures clarity and progress, while a platform-enforced four-condition money-back guarantee holds participants accountable to measurable outcomes.

Phase 1: Building AI Fluency (Days 1–45)

The programme begins with participants completing a **100-course AI Fluency curriculum**, designed to lay the foundational knowledge necessary for navigating AI-native markets. This curriculum covers both technical and operational aspects of artificial intelligence, ensuring participants understand how AI systems function, how they integrate into workflows, and how they can be leveraged to create value.

Simultaneously, participants are paired with their **Brainy 2.0 AI Coach**, a personal AI mentor available 24/7. This mentor provides guidance, answers technical questions, and offers tailored advice to ensure participants stay on track with their learning objectives. With real voice and real face capabilities, the **Brainy 2.0 AI Coach** operates as a simulated advisor, mirroring the experience of having a Silicon Valley business coach.

By Day 45, participants submit a **Venture Builder spec**, an actionable business plan that outlines the AI-driven product or service they intend to develop. This step marks the transition from learning to execution, ensuring participants are prepared to enter the creation phase of the programme.

Phase 2: Operational Execution (Days 46–90)

Once the **Venture Builder spec** is approved, participants move into product development. Using **250 AI Workers**, participants gain access to cloud-based agents that run continuously, enabling them to test prototypes, automate workflows, and scale operations. These agents provide participants with the same computational leverage available to Silicon Valley founders, empowering them to build and refine their AI-native business concepts.

Participants also gain access to the **EON Marketplace**, a network of over **4,400 institutional buyers across 80-plus countries**, providing immediate distribution channels for their products and services. This marketplace eliminates traditional barriers to entry, ensuring participants can connect directly with target customers in high-demand markets.

The final milestone occurs on Day 90, when participants launch a **live product URL** showcasing their AI-driven solution. This marks the culmination of their journey, transitioning them from learners to active contributors in the post-AGI economy.

Accountability and Results: The Money-Back Guarantee

To ensure every participant achieves measurable outcomes, the **AI Founder Programme** is backed by a four-condition, platform-enforced money-back guarantee. The conditions include:

1. Completion of the **100-course AI Fluency curriculum**
2. Attendance at 12 or more **mentor sessions** with the **Brainy 2.0 AI Coach**
3. Submission of a comprehensive **Venture Builder spec** by Day 45
4. Launch of a **live product URL** by Day 90

If participants meet all four conditions and fail to secure paying customers, they are eligible for a full refund. This guarantee eliminates risk for participants, ensuring their efforts result in tangible outcomes or financial restitution.

By combining structured learning, hands-on execution, and direct access to tools and distribution networks, the **AI Founder Programme** delivers a clear pathway for individuals outside the data center to secure their place in the AI economy.

BENEFITS/OUTCOMES

The **AI Founder Programme** empowers individuals to thrive in the post-AGI economy by bridging the gap between theoretical AI knowledge and practical market application. Designed for anyone outside the data center, this programme offers participants access to the same operational toolkit used by Silicon Valley founders, enabling them to become **founders, operators, or skilled independent workers** in AI-native markets.

Financial Independence and Economic Opportunity

One of the programme's most significant outcomes is the potential for financial independence. Participants who select **Door 3: Builder** gain the ability to establish their own AI-native businesses, leveraging **250 AI Workers** to automate processes, develop AI-driven products, and generate revenue. With access to the **EON Marketplace**, participants can immediately market their solutions to over **4,400 institutional buyers across 80-plus countries**, ensuring their work reaches high-demand, global audiences.

The programme's structure is also designed to maximize income potential. Case studies from early programme adopters, such as Sam Brown, demonstrate the effectiveness of the framework — achieving **\$300,000 ARR in just 12 weeks**. By enabling participants to replicate such success, the **AI Founder Programme** provides a direct pathway to financial growth.

Employability in AI-Native Roles

For participants who choose **Door 2: Operator**, the programme equips them with skills to become indispensable contributors in AI-integrated organizations. With the industry acknowledging that only **under 10 percent of workers** will deploy AI agents effectively, the programme ensures participants are part of this elite group. By completing the **100-course AI Fluency curriculum** and engaging with the **Brainy 2.0 AI Coach**, participants gain technical expertise and strategic insights, making them highly employable in roles that require AI-native operation.

In addition, the **EAFI Credential** provides verifiable proof of expertise, offering participants a competitive edge in the workforce. This tamper-resistant public URL signals their capabilities directly to employers, bypassing traditional hiring bottlenecks and ensuring they stand out in the broken entry-level job market.

Navigating AI-Native Markets

For individuals who select **Door 1: Skills**, the programme offers a pathway to trade work AI cannot fully automate, such as plumbing, HVAC maintenance, welding, and auto diagnostics. Participants gain hands-on experience deploying AI to enhance their productivity in these roles, such as using AI diagnostic agents for mechanical troubleshooting. This path ensures participants can remain competitive in jobs that do not require a data center but benefit from AI augmentation.

By equipping participants with tools like **250 AI Workers**, a **Brainy 2.0 AI Coach**, and the ability to launch a **live product URL**, the programme ensures they are not just surviving but thriving in AI-native markets. Whether they become founders, operators, or skilled independent workers, participants secure a foothold in the AI economy while avoiding the structural failures highlighted by industry insiders.

Long-Term Resilience in a Concentrated AI Economy

The **AI Founder Programme** directly addresses the structural failures identified in the Moonshots panel discussion, offering a viable plan for individuals excluded from Silicon Valley's concentrated AI ecosystem. With geo-blocking and market concentration limiting access to advanced models, the programme democratizes AI productivity by providing tools and networks accessible anywhere in the world.

Participants benefit from the programme's focus on global diffusion, gaining access to advanced resources like **Brainy 2.0 AI Coach** and **Distribution Engine** without being tied to a specific geography. This ensures they can participate in the AI economy regardless of their location, creating resilience in an otherwise exclusionary market.

By delivering measurable outcomes such as financial independence, employability, and the ability to navigate new AI-native markets, the **AI Founder Programme** transforms workforce capability for the AI era. It positions participants as active players in the future of work, ensuring they are prepared for the high-stakes transition to a post-AGI economy.

CONCLUSION

EON AI Ventures' **AI Founder Programme** represents a transformative solution to one of the most urgent challenges facing the global workforce today: the structural gap between the promises of artificial general intelligence (AGI) and the practical pathways for individuals to thrive outside the limited geography of Silicon Valley's data centers. For \$975 — the price of a used laptop — this 90-day, self-paced sprint provides a comprehensive toolkit that equips individuals to navigate the post-AGI labor market, where viable career paths have been dramatically reduced to the roles of **founder**, **joiner**, or **investor**.

The industry itself has admitted that no plan currently exists for the billions of people who do not live in San Francisco or work in a frontier lab. As Alex Wissner-Gross stated during the Moonshots podcast, "We need a plan for a country of non-geniuses outside the data center."

These confessions from AI insiders highlight the industry’s failure to bridge the gap between technological advancement and workforce readiness. EON AI Ventures has responded decisively with the **AI Founder Programme**, engineered to deliver the tools needed to thrive in this new economic reality.

The Five Tools Every Participant Gains

Participants in the **AI Founder Programme** receive access to the same operational assets used by top Silicon Valley founders, democratizing opportunities that have historically been concentrated in elite geographies and organizations. These five tools include:

- **250 AI Workers:** At the heart of the programme are 250 AI agents running 24/7 on shared cloud compute. This feature provides unprecedented leverage, allowing participants to harness the compute power typically restricted to data centers.
- **Brainy 2.0 AI Coach:** A personal AI mentor with real face and real voice, accessible any hour of the day. This **AI-powered coach** is designed to accelerate learning and decision-making, offering the same advisory capabilities that SF founders rely on — now available to anyone, anywhere.
- **EON Marketplace:** A global distribution network of 4,400-plus institutional buyers across 80-plus countries. Participants gain direct access to an audience that Silicon Valley founders aggressively pursue, ensuring their products have immediate visibility to high-value customers.
- **EAFI Credential:** A tamper-resistant, employer-verifiable credential with a public URL. This credential serves as proof of competency and capability, enabling participants to display their achievements to employers and customers alike.
- **Distribution Engine:** Built-in automation that surfaces paying customers, eliminating the need for costly growth marketing campaigns. This ensures that participants can focus on building and delivering value while the platform handles customer acquisition.

Mapping to the Post-AGI Labor Market

The **AI Founder Programme** is specifically designed to address the structural realities of the post-AGI labor market, where traditional career paths are rapidly disappearing. As Dave Blundin confirmed during the Moonshots discussion, “To thrive [post-AGI], you either need to be a founder or a joiner or an investor. All other career paths are going to disappear.” EON’s programme aligns directly with these roles through its three distinct paths, or “Doors”:

1. **Door 1 — Skills:** This path empowers individuals to trade work that AI cannot do, such as plumbing, HVAC repair, welding, and other skilled trades. It is the role that does not require access to a data center, offering a practical route for those outside the tech ecosystem.

2. **Door 2 — Operator:** The “joiner” role, designed for individuals who aim to deploy AI agents within companies. This path focuses on becoming part of the under-10 percent of workers who actively manage AI systems, providing ongoing value to employers and ensuring career advancement.

3. **Door 3 — Builder:** The “founder” role, which enables participants to create their own **AI-native businesses**, deploy 250 agents, ship products, and collect revenue. This path democratizes the opportunity to own and operate an AI-driven enterprise, making entrepreneurship accessible for \$975.

Guaranteed Success or Guaranteed Refund

Recognizing the stakes involved, EON AI Ventures backs the **AI Founder Programme** with a robust money-back guarantee. This guarantee is enforced objectively on the platform, ensuring participants have the opportunity to succeed without financial risk. The conditions for the guarantee include:

- Completion of the **100-course AI Fluency curriculum**
- Attendance of 12-plus mentor sessions with **Brainy 2.0 AI Coach**
- Submission of a **Venture Builder spec** by Day 45
- Delivery of a **live product URL** by Day 90

If participants meet all four conditions and do not secure paying customers, they receive every dollar back. This commitment ensures that the programme is results-driven, offering measurable outcomes rather than subjective promises.

Addressing the Structural Failure of the AI Industry

The **AI Founder Programme** is more than a training initiative; it is a direct response to the structural failure of the AI industry to deliver a scalable plan for workforce transformation. The concentration of AI productivity in Silicon Valley — where just one million people account for 14% of global market capitalization — underscores the urgent need for **diffusion**, not further **geo-blocking** or consolidation. EON’s programme is designed to break down these barriers, enabling individuals anywhere in the world to participate in the AI economy at scale.

A Vision for the Future

By offering the critical tools and pathways to thrive in the post-AGI economy, EON AI Ventures is not simply addressing a market gap — it is redefining what workforce capability means in the AI era. The **AI Founder Programme** ensures that individuals can transition from passive observers to active contributors, bridging the gap between what the AI elite know and what the global workforce can do.

For \$975 and 90 days of commitment, participants gain a tangible foothold in the future, equipped with the tools to navigate an AI economy that is accelerating far beyond traditional training systems. In doing so, EON AI Ventures is fulfilling its mission to be the **bridge between what your experts know and what your entire workforce can do**, delivering measurable outcomes in **time-to-competency**, **knowledge retention**, and **economic opportunity** in a rapidly evolving landscape.
