## Executive Summary

EON AI Ventures has unveiled a groundbreaking **90-day programme** tailored specifically for laid-off consultants from **McKinsey, BCG, Bain, Deloitte**, and other Big Consulting firms. This transformative initiative equips professionals with the tools, training, and AI-powered capabilities required to transition into thriving career paths amidst the seismic disruption in the consulting industry caused by **AI displacement**.

The consulting world is facing unprecedented change as **AI technologies** increasingly replace tasks traditionally performed by junior consultants, such as **data analysis, slide preparation, research, and first-draft recommendations**. A **Harvard Business School study** confirms that AI completes this work **25% faster** and **40% better** than human consultants, rendering the traditional consulting pyramid obsolete. With firms like **McKinsey** deploying **25,000 AI agents**, the industry is undergoing rapid restructuring, leaving countless professionals searching for viable alternatives.

EON's programme provides laid-off consultants with actionable solutions through three distinct paths, ensuring they are prepared to thrive in the AI era:

### 1. Path 1 - Become a Skilled Tradesperson

For those looking to pivot away from knowledge work entirely, EON offers a pathway into the lucrative **data centre buildout** sector, where specialised electricians earn up to **\$300,000 a year** with **81,000 openings annually** through **2034**. Participants receive access to **simulation labs**, a robust curriculum, and a **verifiable trade certification**, enabling them to qualify for high-paying roles.

### 2. Path 2 - Become the AI Person at Your Next Company

Professionals who wish to remain employed within organisations can learn how to deploy **AI agents** effectively, making them indispensable assets for companies leveraging **OpenAI Enterprise** and similar technologies. This path focuses on practical implementation, turning participants into experts capable of transforming AI tools into operational solutions.

### 3. Path 3 - Build Your Own One-Person Consulting Practice

Designed for former Big Consulting associates, this path teaches participants to leverage **250 AI agents** to establish independent consulting practices. By Day 91, they are equipped to find clients, build solutions, and deliver results independently — keeping all revenue they generate.

Central to this programme's success is **Brainy 2.0**, an AI mentor with a real face and voice that provides 24/7 guidance, ensuring participants stay on track. Graduates receive the **EAFI credential**, a verified certification that future employers and clients can authenticate. The programme includes a **four-condition money-back guarantee**: participants who complete the curriculum, attend mentor sessions, submit a business plan by Day 45, and deliver a working solution by Day 90 will receive a refund if they fail to secure paying clients.

Priced at just **\$975** (or **\$99 per month**), EON's offering stands out in a market where alternatives such as **McKinsey Academy** charge upwards of **\$5,000** and others like **Y Combinator** or **Antler** require equity and have **single-digit acceptance rates**. Unlike **Coursera** or **Udemy**, which provide courses without actionable deployment paths, EON delivers a complete solution at **consumer pricing**.

This programme is particularly suited for consultants who have been laid off, possess analytical skills, and are eager to leverage their network and expertise in a rapidly changing market. By moving quickly within the **next 90 days**, participants position themselves ahead of competition from thousands of other displaced professionals.

With the consulting industry undergoing dramatic restructuring, EON AI Ventures offers a timely and comprehensive solution that bridges the gap between traditional expertise and the demands of the AI era. Whether transitioning into skilled trades, becoming an AI integrator, or launching an independent consulting practice, EON ensures participants are ready to succeed in high-stakes environments, transforming workforce capability for the AI era.

## The Problem/Challenge

The consulting industry is grappling with a profound transformation as **AI displacement** reshapes the landscape, dismantling the foundational **consulting pyramid** that sustained Big Consulting firms for over five decades. The recent announcement of **McKinsey** cutting **11% of its workforce** serves as a stark indicator of this shift, with firms like **BCG, Bain, Deloitte**, and the **Big Four advisory practices** likely to follow suit in the coming months.

This disruption is driven by AI's ability to perform tasks previously billed at **\$300-\$500 per hour** by junior consultants. Functions such as **research, data analysis, slide preparation, and first-draft recommendations** are now completed by AI with **25% faster delivery** and **40% higher quality**, according to a **Harvard Business School study**. As a result, clients are increasingly demanding **deployed solutions** rather than traditional strategy slides, fundamentally altering the value proposition of consulting firms.

The industry is restructuring in real time. **Pat Petitti**, CEO of consulting marketplace **Catalant**, described this transition as “a perfect storm for legacy consulting firms.” The pyramid model, which relied on armies of junior consultants to support senior professionals, is no longer viable. Even firms that trained these consultants - such as McKinsey - are replacing them with the same **AI technologies**. McKinsey's own deployment of **25,000 AI agents** underscores the extent to which automation has displaced traditional roles.

For laid-off consultants, the implications are clear: returning to the same firms at the same rates, performing the same tasks, is no longer an option - even after market recovery. The work itself has fundamentally changed. Professionals must adapt to these shifts swiftly, as the next wave of layoffs looms and competition intensifies for boutique placements, client engagements, and emerging **AI integrator roles**.

Adding urgency to this challenge is the window of opportunity for retraining and repositioning. Corporate clients with **OpenAI Enterprise contracts** are actively seeking vendors and professionals who can deploy working **AI agent systems**. Early movers who retrain in the **next 90 days** will secure these roles, while those who wait will find themselves competing for diminishing opportunities.

EON AI Ventures has identified this problem and created a targeted solution: a **90-day programme** that offers laid-off consultants actionable paths to reinvent their careers. With **three distinct paths** - transitioning to **skilled trades**, becoming an **AI Person** within a company, or building a **one-person consulting practice** - EON equips participants to navigate this disruption effectively.

This programme addresses the core challenges facing displaced consultants:

- **Skill displacement:** AI now performs tasks once billed at high hourly rates, making traditional roles redundant.
- **Industry restructuring:** The shift from strategy-focused work to solution deployment renders the consulting pyramid obsolete.
- **Competition:** Thousands of professionals are vying for limited high-value roles, with early retraining being the key differentiator.
- **Urgency:** The next **90 days** represent a critical window to retrain and reposition before market saturation.

EON's solution not only provides practical training but also guarantees measurable outcomes. The **money-back guarantee** ensures participants who complete the programme and meet its requirements will secure paying clients or receive their investment back. Additionally, the integration of **Brainy 2.0**, a persistent AI mentor, ensures participants receive personalized, round-the-clock guidance.

For laid-off consultants facing an uncertain future, EON AI Ventures offers a clear and actionable path forward. By bridging the gap between traditional expertise and AI-powered solutions, EON empowers professionals to thrive in the face of industry-wide disruption.

## The Solution

The seismic shifts in the consulting industry, driven by AI displacement, have left thousands of professionals questioning their next steps. EON AI Ventures addresses this uncertainty head-on with its **AI Founder Programme**, a comprehensive 90-day solution designed to transform laid-off consultants into the workforce of the future. Priced at \$975, this programme offers three distinct paths that cater to varying career aspirations: establishing **one-person AI consulting practices**, integrating AI within companies, or transitioning into high-paying **skilled trades** outside knowledge work. Each path emphasizes actionable outcomes, ensuring participants are ready to thrive in the post-AI consulting landscape.

### Path 1: Transition to High-Paying Skilled Trades

For those ready to leave the knowledge work sector entirely, EON's programme offers a transformative route into specialized trades. The **data centre buildout** currently underway in the U.S. presents a lucrative opportunity, with 81,000 openings annually through 2034 and average salaries of \$300,000 per year. EON equips participants with everything they need to enter this field, including tailored **curriculum**, immersive **simulation labs**, and a **verifiable trade certification**. This certification is employer-ready, meaning participants can immediately qualify for high-demand roles without additional barriers. By Day 91, individuals opting for this path will possess the skills and credentials to secure employment in a booming sector.

### Path 2: Become the AI Integrator at Your Next Company

For consultants who wish to stay within the corporate ecosystem but elevate their roles, EON offers the tools to become indispensable in the AI era. This path teaches participants to deploy **AI agents** and integrate them into existing business processes, addressing a growing demand among companies with OpenAI Enterprise contracts. By mastering **agent deployment** and learning how to navigate AI tools effectively, participants become the rare professionals who know how to make AI investments deliver real results. In an era when corporations are shifting from strategy slides to **deployed solutions**, this skillset positions participants as critical assets. By Day 91, they can step into roles where their expertise in AI integration drives measurable business outcomes.

### **Path 3: Build a One-Person AI Consulting Practice**

Perhaps the most compelling path for laid-off Big Consulting associates is the opportunity to create their own **one-person AI consulting practice**. This path leverages the same analytical skills and client-facing expertise these professionals honed at firms like McKinsey, but replaces teams of junior consultants with 250 **AI agents**. EON provides step-by-step guidance to help participants set up their practice, ship real solutions, and secure paying clients. The programme ensures readiness by Day 91, with a unique **money-back guarantee**: participants who meet all programme milestones—including completing the curriculum, attending mentor sessions, submitting a business plan, and delivering a working solution—are refunded if they fail to secure a paying client.

### **Why EON's Solution is Critical Right Now**

Timing is everything. With McKinsey's 11% workforce reduction marking the beginning of widespread layoffs across the consulting industry, rapid retraining is essential. EON's **AI Founder Programme** is designed for speed, enabling participants to retrain and re-enter the market in just 90 days. This agility is crucial as corporate clients are actively seeking AI integrators and vendors, often awarding engagements to the first qualified professional who steps forward. Waiting six months risks losing access to these opportunities as the market saturates with retrained consultants. EON's actionable paths ensure that participants are not just prepared for change—they are positioned to lead it.

This programme provides the bridge between what laid-off consultants know and what the evolving marketplace demands. Whether participants choose skilled trades, corporate integration, or independent consulting, EON's **AI Founder Programme** guarantees a future-ready skillset, ensuring they are prepared to thrive in the AI-driven economy.

## Key Features/Capabilities

EON AI Ventures' **AI Founder Programme** is more than a retraining initiative; it's a comprehensive solution designed to deliver measurable outcomes for laid-off consultants. The programme combines cutting-edge technology, actionable curriculum, and consumer-friendly pricing to ensure participants are ready to thrive in the rapidly evolving AI era.

### Tailored Curriculum for Three Career Paths

The programme's curriculum is structured around three distinct paths, allowing participants to choose the trajectory that aligns with their career goals.

- **Path 1: Skilled Tradesperson** - Participants gain access to **simulation labs** and training designed to qualify them for high-demand roles in the **data centre buildout**, including specialized electrician positions that pay \$300,000 annually. The included **verifiable trade certification** ensures participants meet employer standards, opening doors to lucrative opportunities.
- **Path 2: Corporate AI Integrator** - For those staying within the corporate ecosystem, the curriculum focuses on **AI agent deployment** and integration, teaching participants how to maximize business outcomes using AI tools. These skills are indispensable as corporate clients shift focus from strategy slides to **deployed solutions**.
- **Path 3: Independent AI Consulting Practice** - Tailored for former Big Consulting associates, this path teaches participants to set up a **one-person AI consulting practice** powered by 250 **AI agents**. The curriculum includes business planning, client acquisition, and solution delivery, ensuring participants are ready to secure engagements by Day 91.

### Brainy 2.0: A Persistent AI Mentor

At the core of the programme is **Brainy 2.0**, a 24/7 **AI mentor** with a real face and voice. This mentor provides personalized guidance throughout the 90 days, helping participants navigate complex topics, refine their skills, and stay on track. Brainy 2.0 ensures participants can access expert-level coaching at any time, making the programme flexible and user-friendly.

## **EAFI Credential Verification**

Upon completing the programme, participants earn the **EAFI credential**, a verifiable certification that future employers and clients can easily confirm. This credential serves as proof of expertise, whether participants choose to pursue skilled trades, corporate roles, or independent consulting. Unlike generic certificates offered by platforms like **Coursera** or **Udemy**, the EAFI credential ties directly to practical, outcome-based achievements.

## **Consumer Pricing with No Barriers**

EON's **AI Founder Programme** is uniquely accessible, priced at \$975 with the option to pay \$99 per month. Unlike competitors such as **McKinsey Academy** (\$5,000+ per seat) or **Y Combinator** (which requires equity and offers single-digit acceptance rates), EON's programme requires no application, interview, or waitlist. Participants can start immediately, ensuring they don't lose valuable time during critical moments of industry change.

## **Money-Back Guarantee Tied to Milestones**

EON's commitment to outcomes is backed by a **four-condition money-back guarantee**. Participants who complete the curriculum, attend mentor sessions, submit their business plan by Day 45, and deliver a working solution by Day 90 are refunded their \$975 if they fail to secure paying clients. This guarantee underscores the programme's focus on actionable results and provides peace of mind to participants navigating uncertain career transitions.

## **Access to 250 AI Agents**

Participants pursuing the **one-person consulting practice** path gain access to 250 **AI agents**, enabling them to deliver solutions that match the quality and efficiency of top-tier consulting firms. The agents automate tasks such as research, data analysis, and slide preparation—tasks that junior consultants once billed at \$300-\$500 per hour—allowing participants to operate independently while maintaining high-quality outcomes.

## No Other Programme Matches EON's Offer

When compared to other options in the market, EON's programme stands out for its comprehensive approach. Competitors like **Coursera** and **Udemy** focus on course completion without offering deployment-ready skills or verified credentials. Platforms such as **Y Combinator** and **Antler** require equity stakes and have limited acceptance rates. Meanwhile, **Catalant** connects experts with projects but does not offer retraining or guarantee engagements. EON delivers all three paths, consumer pricing, and guaranteed outcomes, making it the most practical and results-driven solution for laid-off consultants.

## Outcome-Driven Transformation in 90 Days

EON AI Ventures' **AI Founder Programme** is designed to transform participants into future-ready professionals within just 90 days. Whether transitioning to trades, integrating AI into corporate ecosystems, or launching independent consulting practices, the programme ensures measurable outcomes. By combining tailored curriculum, advanced AI technology, and a commitment to participant success, EON delivers a unique, market-ready solution for the consulting industry's next generation.

## How It Works

EON's **90-day programme** is designed to transform laid-off consultants into high-value professionals ready to thrive in the AI-driven economy. The structure of the programme is methodical and flexible, ensuring every participant can explore their potential before committing to a career path. With **Brainy 2.0**, an advanced **AI mentor**, guiding participants through every step, the programme leverages cutting-edge technology to deliver results.

### Phase 1: Exploration and Skill Building (Days 1–45)

The first phase introduces participants to the fundamental tools, technologies, and methodologies that will underpin their future success. During this initial period, all three paths are explored, allowing participants to test each option before making a decisive commitment.

1. **Path 1 - Skilled Tradesperson:** For those looking to pivot away from knowledge work entirely, this path opens doors to lucrative opportunities in the **data centre buildout** sector. Participants gain hands-on experience through **simulation labs** and work toward a **verifiable trade certification**. With 81,000 openings every year through 2034 and salaries averaging **\$300,000 per year**, this path offers financial stability and long-term career prospects.

2. **Path 2 - AI Person at Your Next Company:** This option equips participants to become indispensable resources within existing firms. By mastering the deployment of **AI agents** and tools, they position themselves as the go-to experts within companies transitioning to **OpenAI Enterprise** solutions. The focus is on turning theoretical knowledge into actionable results, ensuring participants are ready to lead AI initiatives.

3. **Path 3 - Build Your Own One-Person Consulting Practice:** Tailored for former consultants with analytical skills, this path provides the framework for creating a **one-person AI consulting practice**. Participants are equipped with 250 **AI agents** to deliver solutions directly to clients. The programme ensures that participants can ship real products or services, gain paying clients, and retain all revenue by **Day 91**.

## **Phase 2: Deep Dive and Decision-Making (Days 45–60)**

At the midpoint of the programme, participants make an informed choice about which path to pursue. By **Day 45**, they submit a **business plan** tailored to their chosen path, ensuring clarity and alignment with their goals. This decision is supported by hands-on experience gained during the exploratory phase and personalized coaching from **Brainy 2.0**.

Key activities include:

- Testing real-world scenarios in **simulation labs**
- Refining strategic approaches with the **AI mentor**
- Learning to deploy solutions effectively across industries

### Phase 3: Execution and Client Engagement (Days 61–90)

The final phase focuses on implementation and achieving tangible results. Participants work intensively to deliver real-world solutions, whether as independent consultants, corporate AI integrators, or skilled tradespeople.

- **Independent Practice:** Consultants in **Path 3** use their 250 **AI agents** to take on paying clients, delivering high-quality results that replace traditional consulting methods.
- **Corporate Integration:** Participants in **Path 2** demonstrate their expertise by deploying **AI tools** within firms, ensuring measurable outcomes that enhance productivity and decision-making.
- **Trades Certification:** Those in **Path 1** complete their credentialing process, backed by **simulation labs** and verified certifications, ready to enter high-demand industries.

### Role of Brainy 2.0 and EAFI Credential

Throughout the programme, **Brainy 2.0**, an AI-powered mentor with a real face and voice, provides 24/7 guidance. Whether participants are troubleshooting technical issues, refining their business plans, or practicing client pitches, this persistent mentor ensures progress. At the end of the programme, successful participants earn the **EAFI credential**, which is verifiable by employers and clients alike, serving as proof of their capabilities.

### Four-Condition Money-Back Guarantee

EON's **money-back guarantee** underscores the programme's confidence in delivering outcomes. Participants who complete the curriculum, attend mentor sessions, submit a **business plan**, and ship a working solution by **Day 90** are guaranteed paying clients. If unmet, the \$975 fee is refunded automatically, ensuring zero risk for participants.

## Benefits/Outcomes

EON's **90-day programme** is a transformative solution for laid-off consultants navigating the rapidly changing consulting industry. By **Day 90**, participants emerge with new skills, actionable expertise, and career paths that align with the AI-driven economy, ensuring financial and professional stability.

### Path-Specific Outcomes

#### 1. Path 1 - Skilled Tradesperson:

Participants who complete this path transition into one of the most lucrative trades in the **data centre buildout** sector. With **81,000 openings every year through 2034** and salaries averaging **\$300,000 annually**, this path offers unmatched stability. The **verifiable trade certification**, backed by **simulation labs**, provides employers with immediate proof of competency, making job placement seamless.

#### 2. Path 2 - AI Person at Your Next Company:

Graduates of this path become indispensable assets within firms transitioning to **OpenAI Enterprise**. Their ability to deploy **AI agents** and integrate advanced tools positions them as leaders in AI adoption. As companies shift from strategy slides to **deployed solutions**, these graduates drive measurable outcomes that enhance productivity and decision-making.

#### 3. Path 3 - Build Your Own One-Person Consulting Practice:

This path transforms participants into independent consultants with **250 AI agents** at their disposal. By leveraging tools provided by EON, they deliver high-quality solutions directly to clients, bypassing traditional consulting structures. Participants retain full revenue from engagements and establish sustainable practices. With paying clients secured by **Day 91**, this path offers immediate financial returns.

## Universal Benefits Across All Paths

- **Immediate Readiness:** Regardless of the chosen path, participants are equipped to start or transition into new roles seamlessly upon completing the programme.
- **Credential Verification:** The **EAFI credential**, earned by successful graduates, is verifiable by future employers or clients, ensuring credibility in professional engagements.
- **Money-Back Guarantee:** EON's **four-condition money-back guarantee** eliminates financial risk for participants, making the programme accessible and outcome-focused.

## Financial and Career Stability in a Changing Industry

As AI reshapes the \$400 billion consulting industry, participants are positioned to thrive, not just survive. Harvard Business School's findings confirm AI delivers consulting work **25% faster** and at **40% higher quality** than human consultants, rendering traditional junior roles obsolete. EON's programme directly addresses this shift, preparing participants to excel in roles aligned with these new realities.

For laid-off consultants, this programme is not just a lifeline; it is a launchpad. By replacing outdated consulting models with **agent deployment** and actionable solutions, participants reclaim control over their careers. Whether through independent consulting, corporate integration, or skilled trades, they achieve financial independence and professional relevance.

## Competitive Edge Over Traditional Alternatives

EON delivers unparalleled value compared to other options:

- **McKinsey Academy:** Costs **\$5,000+** and focuses on outdated strategy models.
- **Coursera and Udemy:** Offer affordable courses (**\$40-\$500**) but lack verifiable credentials and actionable deployment training.
- **Y Combinator and Antler:** Demand equity and have **single-digit acceptance rates**, delaying opportunities by months.
- **Catalant:** Lists **75,000 experts**, most of whom are between engagements.

EON's **consumer pricing** model - **\$975 once or \$99/month** - combined with its comprehensive curriculum, actionable results, and guarantee, sets it apart as the clear choice for laid-off consultants looking to succeed in the AI era.

## Conclusion

By the end of **90 days**, participants are fully equipped to navigate the AI-driven economy, secure high-paying roles, or establish their own practices. With tangible skills, verified credentials, and guaranteed outcomes, EON's programme ensures career longevity and financial resilience in a rapidly evolving market.

## Conclusion

The seismic shift in the consulting industry is no longer a forecast - it is here, affecting thousands of careers and redefining the marketplace overnight. As AI accelerates the displacement of junior consultant work, professionals who once billed \$300-\$500 per hour for analysis, research, and strategy slides now face a stark reality: the **consulting pyramid** that sustained Big Consulting firms for decades is collapsing. In its place, a new opportunity emerges for those ready to adapt and embrace AI as the cornerstone of their professional future.

**EON AI Ventures** has risen to meet this moment with a transformative solution: the **AI Founder Programme**. This 90-day initiative provides laid-off consultants and other professionals with the tools, knowledge, and resources needed to successfully transition into high-value, AI-powered career paths. Whether participants choose to become a **Skilled Tradesperson**, an **AI Person** at their next company, or build a **one-person consulting practice**, the programme ensures they are equipped to thrive in this rapidly evolving landscape.

## Why EON's Programme Is the Bridge to the Future

The **AI Founder Programme** is not just another online course - it is a fully integrated pathway to career reinvention, tailored for the unique challenges of today's displaced

consultants. Unlike traditional training options, EON blends cutting-edge technology with measurable, verifiable outcomes. Participants gain access to **250 AI agents**, a persistent **AI mentor** named **Brainy 2.0**, and a step-by-step curriculum designed to deliver tangible results by **Day 91**. The programme's **four-condition money-back guarantee** reinforces confidence in its effectiveness: complete the curriculum, attend mentor sessions, submit a business plan, and ship a working deliverable. If these conditions are met and no paying client is secured, the \$975 fee is automatically refunded.

## **A Tailored Path for Every Professional**

EON understands that career transitions are not one-size-fits-all, which is why the programme offers three distinct paths:

### **1. Path 1: Become a Skilled Tradesperson**

For those seeking to leave **knowledge work** entirely, EON offers a route into the lucrative **data centre buildout** industry, where specialised electricians earn up to **\$300,000 per year**. With **81,000 openings every year through 2034**, participants receive the necessary curriculum, **simulation labs**, and a **verifiable trade certification** that employers can trust.

### **2. Path 2: Become the AI Person at Your Next Company**

For individuals who want to remain in the workforce but at a higher level, this path focuses on deploying **AI tools** within existing corporate environments. The outcome is clear: participants become indispensable assets to companies navigating their new **OpenAI Enterprise** contracts, filling critical gaps in AI integration and deployment.

### **3. Path 3: Build Your Own One-Person Consulting Practice**

This path is tailored for laid-off **Big Consulting** professionals who want to leverage their existing skill sets in a new model. Armed with **250 AI agents** and the tools to find clients, build solutions, and deliver work, participants can establish independent consulting practices that capture maximum revenue without reliance on legacy firms. By **Day 91**, they are ready to take on paying clients, fully equipped to thrive in the market.

## What Sets EON Apart from Competitors

EON's **AI Founder Programme** stands alone in its ability to offer comprehensive career transition tools at **consumer pricing**, with no barriers to entry. Competitors such as **McKinsey Academy**, **Coursera**, and **Udemy** provide valuable but limited resources, often lacking verified credentials, agent deployment capabilities, or direct pathways to paying clients. Meanwhile, platforms like **Y Combinator** and **Antler** demand equity stakes, lengthy wait times, and restrictive acceptance rates that exclude most applicants.

In contrast, EON delivers:

- **All three career paths** within a single programme.
- A **verifiable credential (EAFI)** that future employers and clients can confirm.
- Immediate enrollment with no application process, interviews, or waitlists.
- A **four-condition money-back guarantee** that underscores EON's commitment to participant success.

## Urgency in the Window to Act

The next **90 days** are critical for laid-off consultants and professionals facing disruption. As industry leaders like **McKinsey**, **BCG**, and **Bain** continue to restructure under AI pressure, more layoffs are inevitable. Simultaneously, corporate clients are actively seeking new vendors to deploy **AI solutions**. The first professionals to retrain and adapt will secure the most lucrative opportunities, while those who wait risk being left behind. EON's programme ensures participants are not just prepared - but positioned to lead - in this new era.

## Enrollment Is Open Today

EON AI Ventures has made the **AI Founder Programme** accessible to all professionals seeking transformation. For just **\$975** (or **\$99 per month**), the programme delivers the tools,

mentorship, and verified credentials needed to transition into high-value careers. Whether participants aim to become **Skilled Tradespeople**, lead **AI integration** at their next company, or establish **one-person consulting practices**, EON equips them to succeed within **90 days**.

This moment represents both a challenge and an opportunity. The consulting industry is restructuring, but those who act decisively can emerge stronger, more independent, and more successful than ever. **EON AI Ventures** is the bridge between displacement and reinvention, ensuring that every professional has the chance to thrive in the **AI era**.
